# API and Integration Advisory and Strategy Services

Navigate a successful integration journey, right from the start!

Organizations usually face significant integration challenges when a new technology trend emerges or different infrastructure hosting options arise. With on-premises, on-cloud and hybrid infrastructure options available for hosting applications today, and as 70% of Information Technology applications, in most organizations, are dependent on integration, the challenge is amplified.

In exploring a new integration landscape, organizations are promised high flexibility. Yet, oftentimes integration capacities are either underutilized or wrongfully used. With multiple integration projects taking place and persistent doubts by business users in realizing the full value of integration, it is advised to seek professional consultancy services at the onset of any and every integration project to visualize an accurate digital roadmap, understand business benefits, and set realistic goals.

Advisory & Development Services - Enterprise Integration Architecture Strategy

Link Development advisory services allows you to identify your current integration landscape status, visualize your business goals and set a clear digital strategy on how to begin your integration transformation journey using Azure iPaaS model.

We provide One Week Assessment service with the following activities:

- Conduct Analysis Sessions with your Integration Team
- Review High-level Integration Architecture
- Evaluate any integration-related functional/non-functional requirements, and constraints

- Review Key Business Scenarios
- Provide Awareness on Azure Integration Services Core Capabilities
- Work closely with customer team in realizing one sample business scenario through Azure Integration Services, if possible

Deliverables & Benefits

By the end of the assessment, our Architecture and Consultancy team provides you the assessment deliverables and outcomes.

- Overall Integration Landscape Report
- Feasibility of leveraging Azure Integration Services

- Azure Integration Services Overview
- Benefits of re-architecting the solution using Azure Integration Services

Microsoft Azure iPaaS solution is a set of cloud services for mission-critical enterprise integration. They provide the core technologies required for crafting a cloud-based integration and making the enterprise ready for the modern hybrid world.

Azure

Don't let legacy application limitations hinder your business. Modernize your enterprise architecture now.
