BizTalk Modernization Assessment

Transform your traditional environment into a modern integration platform using Microsoft Azure iPaaS

Traditionally, organizations have moved from point-to-point integrations to on-premises integration middleware solutions, such as BizTalk Server, to expand their integration landscape. While BizTalk was the solid option back then, today managing this integration environment requires special technical skill-sets, months of development effort and dedicated teams to watch out for scalability and performance issues.

To further scale their integration and assure steady performance at peak times, organizations need to reduce reliance on on-premises solutions and upgrade to more reliable options such as Azure iPaaS (Integration Platform as a Service).

One Week Assessment	Results & Outcomes
Link Development team of architects and consultants will assess your current BizTalk environment and provide recommendations for a professional move into a modern integration platform using Azure iPaaS. • Conduct Analysis Sessions with your Integration Team • Examine the existing BizTalk Solution and Review Integration Architecture • Evaluate any integration-related functional/non-functional requirements	One of the below recommended approaches: • BizTalk Server Upgrade • Offload BizTalk Workloads to Azure IaaS • Hybrid Integration Model (BizTalk + Azure Integration Services) • Re-architect the BizTalk Solution using Azure Integration Services The selected core Azure Integration Services The benefits of the selected modernization approach

Microsoft Azure iPaaS: Cloud Services for Mission Critical Enterprise Integration!

Build new, integrated solutions that connect applications and services on-premises and on cloud. Bring your business workflows together so they are consistent and scalable. Expose your APIs for developers and create opportunities for new business models. Each of these cloud services has value on its own. Together, they provide a full-featured iPaaS capable of connecting both cloud and on-premises software. Designed for mission-critical enterprise integration, Azure Integration Services is an iPaaS for the modern hybrid world

Logic Apps: Connect your business-critical apps with Logic Apps.

API Management: Use a hybrid, multi-cloud management platform for APIs across all environments.

Service Bus: Leverage a reliable cloud Messaging as a service (MaaS) and a simple hybrid integration.

Event Grid: Simplify your event-based apps with Event Grid, a single service for managing routing of all events from any source to any destination.

Move away from traditional ways of integration. Seamlessly integrate applications, data, and processes in your enterprise.
